

Solve It: A Student STEAM Challenge

<p>Topic: Dinosaur Fossils and Prehistoric Models</p>	<p>Materials:</p> <ul style="list-style-type: none"> • Images of dinosaur fossils found in Arizona (online or printed) • *Optional - Computer for research • Various resources for students to create a model or illustration of their dinosaur.
<p>Challenge: Think like a paleo artist and research some of the fossils that have been found here in Arizona. Then design a model or illustration to represent what that dinosaur could have looked like.</p>

Sequence of Instruction	
Define the Problem:	
<u>Guided Questions</u>	<u>Teacher Notes</u>
<ul style="list-style-type: none"> • What do you have available to work with when designing your solution? • What would a successful solution look like? How will you know if your design is successful? • What are your constraints or limitations? 	<ul style="list-style-type: none"> • Have students make observations of pictures of dinosaur fossils (online or printed). You can use Where To Find Dinosaur Fossils and Footprints in Arizona - Rock Seeker or just do a Google search for images. • Have students make a drawing of what the skeleton of the dinosaur could have looked like. A good reference is: https://www.amnh.org/explore/ology/paleontology/drawing-dinos2 • Have students define what they think the problem is with the current models and drawings. • Establish your parameters (groups, roles, time limit, # of trials, amount of material allowed to use, etc.).
Research the Problem:	
<u>Guided Questions</u>	<u>Teacher Notes</u>
<ul style="list-style-type: none"> • What is already known about the problem? • What are some current solutions that can be built upon/improved? • What technology is available to help you understand the problem better? • What are some obstacles, challenges connected to your problem? • 	<ul style="list-style-type: none"> • Have students research what are the concerns related to current models and pictures of dinosaurs. • Use the links in the real-world connections to learn more about Paleo art. • Have the students research how our understanding of what dinosaurs looked like keeps changing.
Brainstorm Possible Solutions:	
<u>Guided Questions</u>	<u>Teacher Notes</u>

<ul style="list-style-type: none"> • How many ideas can you come up with individually? • How many ideas can you come up with as a group? • How can you use/build on the groups ideas to refine your own? 	<ul style="list-style-type: none"> • Have students individually come up with at least 2 possible designs that they could use to demonstrate what their dinosaur could have looked like. • Have students share designs with a group. <i>*Encourage a variety of ideas and a safe environment.</i> • Encourage reflection and refinement of ideas
Choose the Best Solution:	
<u>Guided Questions</u>	<u>Teacher Notes</u>
<ul style="list-style-type: none"> • Which solution(s) could you build using the materials/time you have available? • Which solution(s) could you build considering the constraints/limitations? • Which solution do you think has the best chance to be successful? 	<ul style="list-style-type: none"> • Have students choose a design to make a plan to "build".
Build a Model or Prototype:	
<u>Guided Questions</u>	<u>Teacher Notes</u>
<ul style="list-style-type: none"> • What materials will you need? • Does your design meet the lesson objective? • Does your design clearly communicate your selected solution to the problem? 	<ul style="list-style-type: none"> • Revisit the objective and make sure the students design matches what they chose for their solution to the problem.
Test your Solution:	
<u>Guided Questions</u>	<u>Teacher Notes</u>
<ul style="list-style-type: none"> • Did you record your observations? • How will you know if your design worked as intended? • How will you know if your design was successful? 	<ul style="list-style-type: none"> • Have students make and record observations during their trial(s). • Encourage students to stay true to their design and not make modifications while testing.
Communicate your Solution:	
<u>Guided Questions</u>	<u>Teacher Notes</u>
<ul style="list-style-type: none"> • Did your design work as intended? How do you know? • Did it solve the problem that you identified? How do you know? • Do you still think your solution is the best one for the problem? Why or why not? • What would you different if you could do it again? Why? 	<ul style="list-style-type: none"> • <i>Have students reflect individually first and record responses.</i> • <i>Have students share responses with their group then whole class.</i> • <i>To make iterations, you will want to re-enter the</i>

	<p><i>Engineering Design Process and begin thinking about defining the problem(s) they had with the initial idea.</i></p> <ul style="list-style-type: none">• <i>The purpose is to provide a process for them to formalize their thinking and not rely on trial and error to merely accomplish a task.</i>
